

## Convert Decimals to Fractions

Grade 3

Name: \_\_\_\_\_

Convert each decimal to a fraction.

Count the decimal places: 1 place → denominator 10, 2 places → denominator 100. Multiply the decimal by the denominator to get the numerator.

**Example:**  $0.6 = 6/10$  Tip: move the decimal right to get the numerator — 1 place for /10, 2 places for /100.

(1)  $1.9 = \underline{\quad\quad} / 10$

(2)  $3.6 = \underline{\quad\quad} / 10$

(3)  $3.9 = \underline{\quad\quad} / 10$

(4)  $1.9 = \underline{\quad\quad} / 10$

(5)  $1.3 = \underline{\quad\quad} / 10$

(6)  $3.5 = \underline{\quad\quad} / 10$

(7)  $3.3 = \underline{\quad\quad} / 10$

(8)  $3.2 = \underline{\quad\quad} / 10$

(9)  $5.9 = \underline{\quad\quad} / 10$

(10)  $5.3 = \underline{\quad\quad} / 10$

(11)  $5.7 = \underline{\quad\quad} / 10$

(12)  $1.4 = \underline{\quad\quad} / 10$
