

## Convert Decimals to Fractions

Grade 5

Name: \_\_\_\_\_

Convert each decimal to a fraction.

Count the decimal places: 1 place → denominator 10, 2 places → denominator 100. Multiply the decimal by the denominator to get the numerator.

**Example:**  $0.6 = \frac{6}{10}$  Tip: move the decimal right to get the numerator — 1 place for /10, 2 places for /100.

(1)  $8.01 = \frac{\quad}{100}$

(2)  $5.6 = \frac{\quad}{10}$

(3)  $6.60 = \frac{\quad}{100}$

(4)  $1.6 = \frac{\quad}{10}$

(5)  $6.85 = \frac{\quad}{100}$

(6)  $5.1 = \frac{\quad}{10}$

(7)  $4.95 = \frac{\quad}{100}$

(8)  $5.9 = \frac{\quad}{10}$

(9)  $8.62 = \frac{\quad}{100}$

(10)  $7.9 = \frac{\quad}{10}$

(11)  $6.62 = \frac{\quad}{100}$

(12)  $9.8 = \frac{\quad}{10}$
