

Arctic Ocean Food Chain: Who Eats Who?

Grade 4

Name: _____

Put the organisms in the correct order to build a food chain, starting from the Sun.
Energy flows from the Sun → Producer → Herbivore → Carnivore → Apex Predator. Each link shows who eats what.

WORD BANK

Cod — a fish that eats krill and other small invertebrates (secondary consumer)

Polar Bear — an apex predator that hunts and eats seals (apex predator)

Sun — provides energy for all life

Seal — a marine mammal that hunts and eats cod and other fish (tertiary consumer)

Phytoplankton — microscopic organisms that absorb sunlight to make food (producer)

Krill — small crustaceans that eat phytoplankton (primary consumer)
