WORD BANK

Jupiter: The fifth planet, a massive gas giant with a Great Red Spot.

Mars: The fourth rocky planet, often called the 'Red Planet.'

Neptune: The eighth and farthest ice giant from the Sun, known for strong winds.

Venus: The second rocky planet, known for its extreme heat and thick atmosphere.

Mercury: The smallest and closest rocky planet to the Sun.

Saturn: The sixth planet, a gas giant famous for its extensive ring system.

Earth: The third rocky planet from the Sun, unique for supporting life.

Uranus: The seventh planet, an ice giant that rotates on its side.
